

Want to take better care of your associates?
Improve productivity?
Reduce LTIs and Comp claim costs?

FRED'S GOT YOUR BACK

BACK INJURIES caused by lifting and shifting heavy case-loads are the #1 avoidable cost of LTIs and Comp claims in DC, warehouse and retail environments.

FRED will cut those costs significantly. A revolutionary improvement on the humble sack-trolley, or trolley-truck, FRED is the world's first 'step-trolley'.

FRED will do for the safe and efficient handling of case-loads what the fork-lift truck did (and does) for the safe and efficient handling of pallet-loads.

FRED employs a patented, simple yet radical, application of the principles of weight-leverage. The user's own body-weight is leveraged to lift, shift and lower heavy loads with far less strain on the user's back compared to standard sack-trolleys.

Technical information

FEATURES

Dual-handed operation for safety

Full safety-locking

Independent ergonomics and risk assessment

SPECIFICATIONS

Weight

20kg

Lifting Load Capacity

100kg

Lowered position Load Capacity

200kg

Construction

Heat-treated aluminium and
composite-reinforced plastics

Lift time

<3 seconds

Lift height

up to 640mm
